OP-CFP4-LR4

100 Gb/s CFP4 LR4 Transceiver Module

PRODUCT FEATURES

- Compliant with 100GBASE-LR4 and 4I1-9D1F

- Support line rates from 103.125 Gbps to 111.81 Gbps

- Integrated LAN WDM EML TOSA / ROSA for up to 10 km reach over SMF

- Digital Diagnostics Monitoring Interface

- Duplex LC optical receptacle

- No external reference clock

- Single 3.3 V power supply

- Case operating temperature range:0°C to 70°C

- Power dissipation < 6W

APPLICATIONS

- Data Center &100G Ethernet

- ITU-T OTU4

STANDARD

- Compliant to IEEE 802.3ba and ITU-T G959.1

- Compliant to CFP MSA CFP4 Hardware Specification

- Compliant to CFP MSA Management Interface Specification

General Description

OPTINET 100G CFP4 LR4 optical Transceiver integrates receiver and transmitter path on one

module. In the transmit side, four lanes of serial data streams are recovered, retimed, and passed to four laser drivers. The laser drivers control four EMLs (Electric-absorption Modulated Lasers) with center wavelength of 1296 nm, 1300nm, 1305nm and 1309 nm. The optical signals are multiplexed to a single –mode fiber through an industry standard LC connector. In the receive side, the four lanes of optical data streams are optically de-multiplexed by the integrated optical de-multiplexer. Each data stream is recovered by a PIN photo-detector and trans-impedance amplifier, retimed. This module features a hot-pluggable electrical interface, low power consumption and MDIO management interface.

The module provides an aggregated signaling rate from 103.125 Gbps to 111.81 Gbps. It is compliant with IEEE 802.3 ba 100GBASE-LR4 and ITU-T G.959.1 4I1-9D1F, and OIF CEI-28G-VSR. The MDIO management interface complies with IEEE 802.3 Clause 45 standard. The transceiver complies with CFP MSA CFP4 Hardware Specification, CFP MSA Management Interface Specification, and OIF CEI-28G-VSR standards. A block diagram is shown in Figure 1.

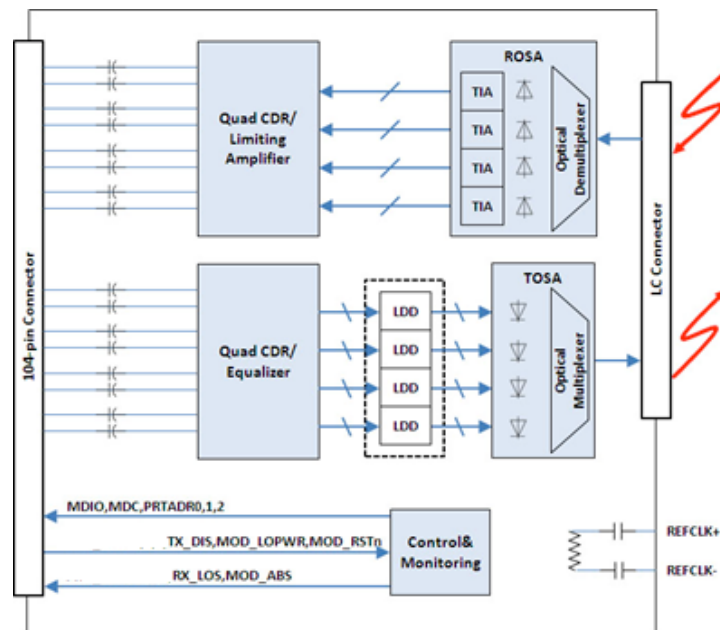

Figure 1. CFP4 LR4 Optical Transceiver functional block diagram

Transmitter
The transmitter path converts four lanes of serial NRZ electrical data from line rate of 25.78

Gbps to 27.95 Gbps to a standard compliant optical signal. Each signal path accepts a 100 Ω differential 100 mV peak-to-peak to 900 mV peak-to-peak 25 Gbps electrical signal on TDxn and TDxp pins. Inside the module, each differential pair of electric signals is input to a CDR (clock-data recovery) chip. The recovered and retimed signals are then passed to a laser driver which transforms the small swing voltage to an output modulation that drives a EML laser. The laser drivers control four EMLs with center wavelengths of 1295.56 nm, 1300.05 nm, 1304.58 nm and 1309.14 nm. The optical signals from the four lasers are multiplexed together optically. The combined optical signals are coupled to single-mode optical fiber through an industry standard LC optical connector.

Receiver
The receiver takes incoming combined four lanes optical data from line rate of 25.78 Gbps to 27.95 Gbps through an industry standard LC optical connector. The four incoming wavelengths are separated by an optical de-multiplexer into four separated channels. Each output is coupled to a PIN photo-detector. The electrical currents from each PIN photo-detector are converted to a voltage with a high-gain trans-impedance amplifier. The electrical output is recovered and retimed by the CDR chip. The four lanes of reshaped electrical signals are output to RDxp and RDxn pins.

Low Speed Signaling
Low speed signaling is based on low voltage CMOS (LVCMOS) operating at a nominal voltage of 3.3 V for the control and alarm signals, and at a nominal voltage of 1.2 V for MDIO address, clock and data signals. All low speed inputs and outputs are based on the CFP MSA CFP4 Hardware Specification and CFP MSA Management Interface Specification.

MDC/MDIO: Management interface clock and data lines.

PRTADR0, 1, 2: Input pins. MDIO physical port addresses.

GLB_ALEMn: Output pin. When asserted low indicates that the module has detected an alarm condition in any MDIO alarm register.

TX_Disable: Input pin. When asserted high or left open the transmitter output is turned off. When Tx_Dsiable is asserted low or grounded the module transmitter is operating normally. Pulled up with 4.7 kΩ to 10 kΩ resistors to 3.3 V inside the CFP4 module.

MOD_LOPWR: Input pin. When asserted high or left open the CFP4 module is in low power mode. When asserted low or grounded the module is operating normally. Pulled up with 4.7 kΩ

to 10 kΩ resistors to 3.3 V inside the CFP4 module.

MOD_RSTn: Input pin. When asserted low or grounded the module is in Reset mode. When asserted high or left open the CFP4 module is operating normally after an initialization process. Pulled down with 4.7 kΩ to 10 kΩ resistors to ground inside the CFP4 module.

Mod_ABS: Output pin. Asserted high when the CFP4 module is absent and is pulled low when the CFP4 module is inserted.

RX_LOS: Output pin. Asserted high when insufficient optical power for reliable signal reception is received.

Table 1 CFP4 optical transceiver pin descriptions

Pin no.	Type	Description
1	3.3V_GND	3.3V Module Supply Voltage Return Ground, can be separate or tied together with Signal Ground
2	3.3V_GND	
3	3.3V	3.3V Module Supply Voltage
4	3.3V	3.3V Module Supply Voltage
5	3.3V	3.3V Module Supply Voltage
6	3.3V	3.3V Module Supply Voltage
7	3.3V_GND	3.3V Module Supply Voltage Return Ground, can be separate or tied together with Signal Ground
8	3.3V_GND	
9	NUC	Module Vendor I/O. Must No Connect at host board
10	NUC	Module Vendor I/O. Must No Connect at host board
11	TX_DIS	Transmitter Disable for all lanes, "1" or NC = transmitter disabled, "0" = transmitter enabled
12	RX_LOS	Receiver Loss of Optical Signal, "1": low optical signal, "0": normal condition
13	GLB_ALRMn	Global Alarm. "0": alarm condition in any MDIO Alarm register, "1": no alarm condition, Open Drain, Pull Up Resistor on Host
14	MOD_LOPWR	Module Low Power Mode. "1" or NC: module in low power (safe) mode, "0": power-on enabled
15	MOD_ABS	Module Absent. "1" or NC: module absent, "0": module present, Pull Up Resistor on Host
16	MOD_RSTn	Module Reset. "0" resets the module, "1" or NC = module enabled, Pull Down Resistor in Module
17	MDC	Management Data Clock (electrical specs as per 802.3ae and ba)
18	MDIO	Management Data I/O bi-directional data (electrical specs as per 802.3ae and ba)
19	PRTADR0	MDIO Physical Port address bit 0
20	PRTADR1	MDIO Physical Port address bit 1
21	PRTADR2	MDIO Physical Port address bit 2
22	NUC	Module Vendor I/O. Must No Connect at host board
23	NUC	Module Vendor I/O. Must No Connect at host board
24	NUC	Module Vendor I/O. Must No Connect at host board
25	GND	
26	TX_MCLKn	TX Monitor Clock Output (Positive)
27	TX_MCLKp	TX Monitor Clock Output (Negative)
28	GND	
29	GND	
30	RX0p	Lane 0 Receiver Output (Positive)
31	RX0n	Lane 0 Receiver Output (Negative)
32	GND	
33	RX1p	Lane 1 Receiver Output (Positive)
34	RX1n	Lane 1 Receiver Output (Negative)
35	GND	

36	RX2p	Lane 2 Receiver Output (Positive)
37	RX2n	Lane 2 Receiver Output (Negative)
38	GND	
39	RX3p	Lane 3 Receiver Output (Positive)
40	RX3n	Lane 3 Receiver Output (Negative)
41	GND	
42	REFCLKp(NUC)	Reference Clock Input (Positive) (Optional)
43	REFCLKn(NUC)	Reference Clock Input (Negative) (Optional)
44	GND	
45	TX0p	Lane 0 Transmitter Input (Positive)
46	TX0n	Lane 0 Transmitter Input (Negative)
47	GND	
48	TX1p	Lane 1 Transmitter Input (Positive)
49	TX1n	Lane 1 Transmitter Input (Negative)
50	GND	
51	TX2p	Lane 2 Transmitter Input (Positive)
52	TX2n	Lane 2 Transmitter Input (Negative)
53	GND	
54	TX3p	Lane 3 Transmitter Input (Positive)

Receiver electrical output to host					
Differential voltage pk-pk		100	1200	mV	
Common mode noise (rms)			17.5	mV	
Differential termination mismatch			10	%	
Transition time		9.5		ps	20/80%

MDIO Management Interface

The OPTINET CFP4 Optical Transceiver incorporates MDIO management interface which is used for serial ID, digital diagnostics, and certain control and status report functions. The

CFP4 transceiver supports MDIO pages 8000h NVR 1 Based ID registers, 8080h NVR 2 Extended ID registers, 8100h NVR 3 network lane specific registers , 8180h NVR 4 registers ,and pages A000h module VR 1 registers(module level control and DDM registers)， A200h network lane VR 1 registers，A280h network lane VR 2 registers,A400h host lane VR1 specific registers.

Details of the protocol and interface are explicitly described in CFP MSA Management Interface Specification. Please refer to the specifications for design reference.
